Permanent employees analysis

Andrew Ba Tran

12/18/2017

This analysis seeks to compare the body count of federal employees for President Trump's first nine months in office (That's the most recent data currently available) compared to President Obama in that same time frame.

It was part of the story: How the Trump era is changing federal bureaucracy (https://www.washingtonpost.com/politics/how-the-trump-era-is-changing-the-federal-bureaucracy/2017/12/30/8d5149c6-daa7-11e7-b859-fb0995360725_story.html).

Other data and analysis scripts can be found in the **wpinvestigative (https://github.com/wpinvestigative /federal_employees_trump_2017)** Github repo.

The analysis for this story is based on raw data from the U.S. Office of Personnel Managament Employment Cubes (https://www.opm.gov/Data/) and seeks to focus on permanent employees (so excluding seasonal and appointed positions) in an effort to normalize the figures.

Change in permanent full time employees

In the first nine months in office, government under Obama grew by 68,000 people— or 4 percent.

Trump saw a drop of 16,000 permanent employees during that same time frame. Even though Trump started out with more government employees, the workforce shrank by .8 percent. That's the first time that's happened since Clinton.

```
kable(total_summary)
```

President	December	September	Difference	Percent change
Obama	1775059	1842989	67930	3.83
Trump	1962965	1947048	-15917	-0.81
